Latency and Interpeak Interval Values of Auditory Brainstem Response (ABR) Using A Click Stimulus with the Neuroaudio Equipment

General Recommendation: Major faults - probably not acceptable

Comments to Editor:
This manuscript has not been adequately prepared for journal submission. The authors have been given detailed requests to substantively revise this, prepare a manuscript, and remove plagiarized content.

Comments to Author:
The authors have presented a manuscript that has not been adequately prepared for journal submission as an original Research Article. The authors are requested to spend some time substantively revising this and preparing a manuscript that can be peer reviewed. The manuscript contains an unacceptable amount of plagiarized written content, which should be removed or re-written. Up to 10% of the manuscript, including whole sections of the Methods, have been plagiarized from https://www.mdpi.com/2075-1729/10/11/287/htm and https://www.hindawi.com/journals/bmri/2019/8930904/ Please read and follow the Instructions for Authors for this journal and format the manuscript and References correctly, for an original Research Article for this journal. See, - https://www.medscimonit.com/instructions. Please use the required main sections: Title; Abstract - structured and <250 words; Keywords; Background; Methods; Results; Discussion; Conclusions; References; Tables; Figure Legends. Please write the content in sentences and paragraphs and do not use lists and bullet points.

Title and abstract
The authors have presented a manuscript that has not been adequately prepared for journal submission as an original Research Article. The authors are requested to spend some time substantively revising this and preparing a manuscript that can be peer reviewed.

Please substantively revise the manuscript as follows:

1. The manuscript contains an unacceptable amount of plagiarized written content, which should be removed or re-written. Up to 10% of the manuscript, including whole sections of the Methods, have been plagiarized from: https://www.mdpi.com/2075-1729/10/11/287/htm & https://www.hindawi.com/journals/bmri/2019/8930904/

   a) Please remove the following 40 words: Immittance audiometry was performed using an Interacoustics 235 h audiometer. All equipment was calibrated according to ISO-389 and IEC-645 standards. All subjects who presented normal answers in the basic audiological evaluation then proceeded to an electrophysiological evaluation of their hearing.... which have been plagiarized from: https://www.mdpi.com/2075-1729/10/11/287/htm

   b) Please remove or re-write the following 47 words: The gender and side were included in both models as a fixed effect, as well as their interactions. When the interaction effect between side and group was considered significant (p <0.05), the ears and gender were analyzed separately. First, the assumption of normality was checked using a .... which have been plagiarized from: https://www.hindawi.com/journals/bmri/2019/8930904/

2. Please read and follow the Instructions for Authors for this journal and format the manuscript and References correctly, for an original Research Article for this journal. See, - https://www.medscimonit.com/instructions.

3. Please use the required main sections: Title; Abstract - structured and <250 words; Keywords; Background; Methods; Results; Discussion; Conclusions; References; Tables; Figure Legends.

4. Please write the content in sentences and paragraphs and do not use lists and bullet points.

5. This appears to be a small study on auditory brainstem response (ABR) audiometry - the term, - click stimulus - is not the correct term

6. Throughout the manuscript, please define all abbreviations when first used in the Abstract, the main manuscript, in each Table footnote, and in each Figure legend so that the manuscript content can be understood.
7. A clear and descriptive Title is required. For example, - ..... Latency and Interpeak Interval Values Measured by Auditory Brainstem Response (ABR) Audiometry in 25 Individuals with Normal Hearing.

8. The Abstract should be no more than 250 words in length, and all abbreviations should be defined when first used.

9. The Background subsection of the Abstract should state the aims of the study.

10. In the Methods subsection of the Abstract, clearly state the number of study participants and the methods used.

11. In the Results subsection of the Abstract, clearly describe what the results were.

12. The Conclusions subsection of the Abstract should clearly state what may be learned from the study.

13. Please include a maximum of 5 Keywords using terms from the Medical Subject Heading (MeSH) database on the PubMed site (http://www.ncbi.nlm.nih.gov/mesh).

**Introduction**

14. In the main Background section, please support each statement of fact with a Reference citation.

15. Please clearly describe latency and interpeak interval values and auditory brainstem response (ABR) audiometry

16. Please cite and introduce similar studies to your study so that you can discuss and compare previous findings with your data in the Discussion section.

17. Please end the main Background section with a statement of the aims of the study.

**Material and Methods**

18. Please divide the main Methods section into clear subsections with clear subsection headings. Please begin the main Methods section with the Ethical statement that includes the Ethics Committee approval details and also the details of the study participant informed consent.

19. Please write the content clearly and support the methods used with a Reference.

20. Please give the details of the source of all equipment used.

**Statistical Analysis**

**Results**

21. Please write the content of the Results section more clearly and divide this section into clear subsections with clear subsection headings.

**Discussion**

22. The main Discussion section should begin by summarizing your findings. Then, compare your findings with the findings from previous similar studies that you introduced in the Background section.

23. The Discussion section must end with a paragraph that discusses the limitations of the study. Also, please discuss the limitations of the main methods

**Conclusions**

24. The main Conclusions section should be clear and concise and should match the Abstract.

**Tables and Graphics**

25. The Tables and Figure legends should be added at the end of the manuscript, after the Reference list.

26. The Figure legends should have a clear and descriptive title. Each legend should clearly describe what is being shown in the Figure. All abbreviations should be defined when first used in each Figure legend, so that the reader can understand the Figures when looking at them individually and separate from the main manuscript.

27. Each Table should have a clear and descriptive title. All abbreviations should be defined in a footnote for
each Table.

References

28. References should be recent, relevant, and accessible by the readers of this journal. Therefore, Reference 2 could be replaced by:

29. Please format the References according to the guidelines for this journal. For example, Reference 4 should be written as:

General comments to the Authors

The authors have presented a manuscript that has not been adequately prepared for journal submission as an original Research Article.

The authors are requested to spend some time substantively revising this and preparing a manuscript that can be peer reviewed.

The manuscript contains an unacceptable amount of plagiarized written content, which should be removed or re-written. Up to 10% of the manuscript, including whole sections of the Methods, have been plagiarized from: https://www.mdpi.com/2075-1729/10/11/287/htm & https://www.hindawi.com/journals/bmri/2019/8930904/

Please read and follow the Instructions for Authors for this journal and format the manuscript and References correctly, for an original Research Article for this journal. See, - https://www.medscimonit.com/instructions.

Please use the required main sections: Title; Abstract - structured and <250 words; Keywords; Background; Methods; Results; Discussion; Conclusions; References; Tables; Figure Legends.

Please write the content in sentences and paragraphs and do not use lists and bullet points.
